# Linutop 2.2 the latest version of Linutop small Linux PC

*The best of Open Source with FireFox 3 and OpenOffice 2.4*

**Paris, July 1st, 2008 –** The Open Source market should almost triple in value between 2007 and 2012, according to a recent study of IDC. On this dynamic market, the Linutop company, specialized in Small Linux PC announces today the new version of its leading product, Linutop 2.2.

Linutop is a small Linux PC designed to reduce maintenance costs. Delivered with ready to use software it is perfect for public office use in Hotels, Museums, Schools, Offices, for Digital display, Internet Access or editing documents …

**Based on the Ubuntu 8.04**, the latest version of the most popular linux, Linutop gives access to the **largest open source software library available now**, using the Ubuntu platform.

## Secure and efficient web browsing with Firefox 3

Linutop simplifies and secures the internet browsing with Firefox 3.0. The latest version of Firefox, provides smart address bar, improved downloads and bookmarks manager, better security, all theses innovative features are now available on the Linutop.

## … standard office suite with OpenOffice 2.4

Linutop also includes the new OpenOffice 2.4, the leading and most comprehensive open source software suite. With state of the art office tools (word processing, spreadsheet, presentation and vector graphic drawing) compatible with all standard formats, OpenOffice is ideal for a professional use.

Linutop comes with a 1GB USB internal flash memory containing the operating system and software.

## Linutop in brief

Linutop is a small, Linux-based PC intended for accessing the Internet, displaying digital contents and performing standard office tasks. The fact that it does not contain an internal hard disk means that it is completely silent, more compact, low on power consumption and more robust. It comes with optimized software on a 1GB USB key used to access the Internet and Digital Contents (Text, Photos, Music & Video). Linutop is designed for professional users, particularly for point-of-sale advertising, company intranet posting, etc. but also for consumers looking for Internet access and simple office applications. Its small size and low power consumption also make it an ideal solution for difficult environments, particularly industrial facilities.

*About the Linutop company*
*Established in Europe and specialized in low-consumption IT solutions, Linutop develops and distributes small, robust PCs based on open-source software. The company supplies innovative, economic solutions for the dynamic display of web pages and digital contents wherever the user happens to be. Its leading product, the Linutop small PC, is sold in more than 30 countries. Thanks to its rock-bottom maintenance cost and very low power consumption, it is ideal for use in the business environment for POS advertising, sales automates, kiosks, timetable displays... and all applications displaying or accessing remote digital contents. It has no fan or moving parts, and its small size and low power consumption also make it an interesting candidate for industrial uses (onboard PCs, building automation, industrial controllers, etc.). Linutop was awarded the TIC21 price for sustainable innovation 2007.*
