

PRESS RELEASE

Digital TV now available on Linutop V1.2

*With the Linutop, you can now watch TV, videos
or access the Internet on the same screen.*

Paris, November 7th, 2007

- Linutop is pleased to announce today a major software upgrade shipped with its small and silent PC. Linutop software V1.2 accelerates full screen video and enables Digital TV (Web TV, DVBT, Video files).

The new software package V1.2 includes:

- New graphic drivers allowing full screen video.
- A new set of drivers for USB DVBT dongles to access Digital TV.
- Ability to display video files from an external storage or Web TV.
- Accessibility to Windows shared folders over the network.
- Ability to broadcast digital video or audio streams to any computer on a network.

Other enhancements:

- PXE boot
- Shorter boot time

Totally silent and energy efficient, Linutop provides a new user experience to access digital contents.

Current Linutop customers can upgrade their software for free from www.linutop.com .

Linutop in brief

Linutop is a small, Linux-based PC intended for accessing the Internet, displaying digital contents and performing standard office tasks. The fact that it does not contain an internal hard disk means that it is completely silent, more compact, low on power consumption and more robust. It comes with optimized software on a 1GB USB key used to access the Internet and Digital Contents (Text, Photos, Music & Video). Linutop is designed for professional users, particularly for point-of-sale advertising, company intranet posting, etc. but also for consumers looking for Internet access and simple office applications. Its small size and low power consumption also make it an ideal solution for difficult environments, particularly industrial facilities. Linutop was awarded the **TIC21 price for sustainable innovation 2007**.

Linutop is available for direct purchase at www.linutop.com 280 euros + VAT + shipping.

About the Linutop company

Established in Europe and specialized in low-consumption IT solutions, Linutop develops and distributes small, robust PCs based on open-source software. The company supplies innovative, economic solutions for the dynamic display of web pages and digital contents wherever the user happens to be. Its leading product, the Linutop small PC, is sold in more than 30 countries. Thanks to its rock-bottom maintenance cost and very low power consumption, it is ideal for use in the business environment for POS advertising, sales automates, kiosks, timetable displays... and all applications displaying or accessing remote digital contents. It has no fan or moving parts, and its small size and low power consumption also make it an interesting candidate for industrial uses (onboard PCs, building automation, industrial controllers, etc.).
